

Assignment -4

Assignment Date	19 October 2022
Student Name	DEEPIKA. J
Student Roll Number	19BCS017

Write code and connection in Wowki for ultrasonic sensor.

Whenever distance is less than 100 cm send "Alert" to IBM cloud and display in device recent events

Wowki link: <https://wokwi.com/projects/346389445244617300>

Step 1 : Add new device in IBM cloud

IBM Watson IoT Platform

7179kc1kc1kc1kc1kc1kc19bcs019@smartinternz.com
ID: xdhbdo

Browse Action Device Types Interfaces

Add Device

Browse Devices

All Devices Diagnose

This table shows a summary of all devices that have been added. It can be filtered, organized, and searched on using different criteria. To get started, you can add devices by using the Add Device button, or by using API.

Search by Device ID

Device Simulator

	Device ID	Status	Device Type	Class ID	Date Added	Descriptive Location
>	1234	Disconnected	abcd	Device	Oct 12, 2022 6:29 PM	
>	123456	Disconnected	aaaa	Device	Oct 12, 2022 6:43 PM	
>	5678	Connected	sulana_4	Device	Oct 24, 2022 12:08 PM	

Items per page 50 | 1-3 of 3 items

1 of 1 page

Step 2: Complete the Circuit and run the program

The screenshot shows the WOKWI simulation environment. On the left, the 'sketch.ino' file contains the following code:

```
1 #include <WiFi.h> //Library for wifi
2 #include <PubSubClient.h> //Library for MQTT
3
4 void callback(char* topic, byte* payload, unsigned int payloadLength);
5 \
6 //-----credentials of IBM Accounts-----
7
8 #define ORG "xdhbd0" //IBM ORGANIZATION ID
9 #define DEVICE_TYPE "sulana_4" //Device type mentioned in ibm watson IOT Platform
10 #define DEVICE_ID "5678" //Device ID mentioned in ibm watson IOT Platform
11 #define TOKEN "PF32(1uMUVfTcLC7)h" //Token
12 String data3;
13
14 //----- Customise the above values -----
15
16 char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; // Server Name
17 char publishTopic[] = "iot-2/evt/Data/fmt/json"; // topic name and type of event perform and format in
18 char subscribTopic[] = "iot-2/cmd/command/fmt/String"; // cmd REPRESENT command type AND COMMAND IS T
19 char authMethod[] = "use-token-auth"; // authentication method
20 char token[] = TOKEN;
21 char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID; //client id
22
23 //-----
24 WiFiClient wificlient; // creating the instance for wificlient
25 PubSubClient client(server, 1883, callback, wificlient); //calling the predefined client id by passing
26 const int trigpin = 5;
27 const int echopin = 18;
28 const int ledpin = 2;
29
30
31 long duration;
32 float distance;
33 #define sound_speed 0.034
34 void setup() {
35 // put your setup code here, to run once:
36 pinMode(trigpin, OUTPUT);
37 pinMode(echopin, INPUT);
38 pinMode(ledpin, OUTPUT);
39 }
```

On the right, the 'Simulation' window shows a circuit diagram with an ESP32 microcontroller, an Ultrasonic Distance Sensor, and an LED. The sensor's distance is set to 95cm. The console output shows the following messages:

```
94.94
Sending payload: {"ALERT...!! ": 94.98}
Publish ok
ALERT...!!!
94.98
Sending payload: {"ALERT...!! ": 94.96}
Publish ok
```

Output in WOKWI

a) when the distance is below 100 cms

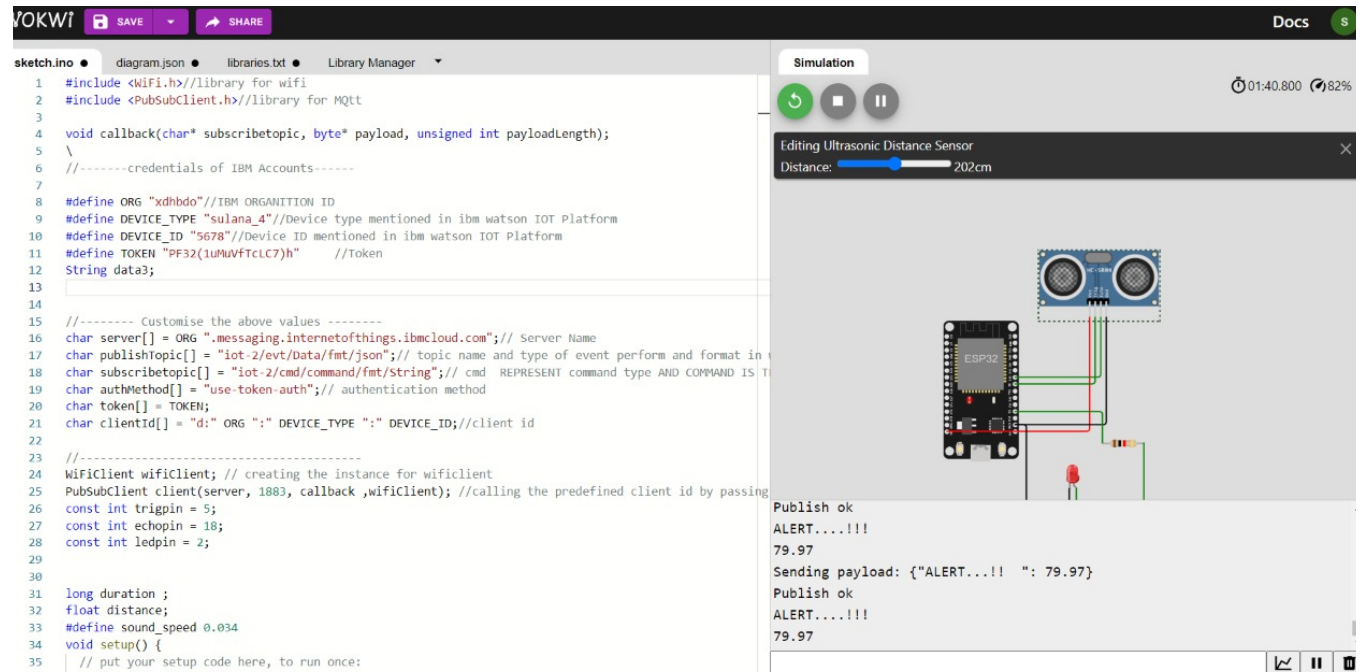

The screenshot shows the WOKWI simulation environment. On the left, the 'sketch.ino' file contains the following code:

```
1 #include <WiFi.h> //Library for wifi
2 #include <PubSubClient.h> //Library for MQTT
3
4 void callback(char* topic, byte* payload, unsigned int payloadLength);
5 \
6 //-----credentials of IBM Accounts-----
7
8 #define ORG "xdhbd0" //IBM ORGANIZATION ID
9 #define DEVICE_TYPE "sulana_4" //Device type mentioned in ibm watson IOT Platform
10 #define DEVICE_ID "5678" //Device ID mentioned in ibm watson IOT Platform
11 #define TOKEN "PF32(1uMUVfTcLC7)h" //Token
12 String data3;
13
14 //----- Customise the above values -----
15
16 char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; // Server Name
17 char publishTopic[] = "iot-2/evt/Data/fmt/json"; // topic name and type of event perform and format in
18 char subscribTopic[] = "iot-2/cmd/command/fmt/String"; // cmd REPRESENT command type AND COMMAND IS T
19 char authMethod[] = "use-token-auth"; // authentication method
20 char token[] = TOKEN;
21 char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID; //client id
22
23 //-----
24 WiFiClient wificlient; // creating the instance for wificlient
25 PubSubClient client(server, 1883, callback, wificlient); //calling the predefined client id by passing
26 const int trigpin = 5;
27 const int echopin = 18;
28 const int ledpin = 2;
29
30
31 long duration;
32 float distance;
33 #define sound_speed 0.034
34 void setup() {
35 // put your setup code here, to run once:
36 pinMode(trigpin, OUTPUT);
37 pinMode(echopin, INPUT);
38 pinMode(ledpin, OUTPUT);
39 }
```

On the right, the 'Simulation' window shows the same circuit diagram, but the sensor's distance is set to 80cm. The console output shows the following messages:

```
ALERT...!!!
79.97
Sending payload: {"ALERT...!! ": 79.97}
Publish ok
ALERT...!!!
79.97
Sending payload: {"ALERT...!! ": 79.97}
```

b) when the distance is above 100 cms ,(no alert message is displayed here for 202 cm)

Output in IBM CLOUD (Watson Platform)

Displayed in device recent events
